

PROJECT PROPOSAL

Name: Alana Brielle Sabile

Grade & Section: 8 Ilang-Ilang

Subject: Computer Science 2

Teacher: Erica Vinas

Date (submitted): September 19, 2026

I. Project Title

School Canteen Budget Planner

II. Problem Statement

Students often bring a limited amount of money to school and need to decide what food or drinks they can afford. Without a simple way to plan their purchases, they may spend too much early in the day or have difficulty tracking their remaining money. This project proposes a program that lets students enter their budget and planned canteen items, then calculates the total cost and remaining balance. This is useful because it helps students check their spending plan before making a purchase.

III. Project Objectives

- Create a program that lets a user enter a daily budget and up to 10 canteen items with their prices.
- Calculate and display the total cost, remaining balance, and whether the planned purchase is within the user's budget.
- Prepare the project plan and initial GitHub repository structure during the first quarter, ready for future program development.

IV. Planned Features

- Enter the available daily budget.
- Add food or drink items and their prices.
- Calculate total planned spending automatically.
- Calculate the money left after the planned purchase.
- Display whether the purchase is within budget or over budget.
- Review the planned items before finishing.

V. Planned Inputs and Outputs

Inputs (what the user enters)

- Daily Budget
- Number of Items
- Item Name
- Item Price

Outputs (what the system returns)

- List of planned canteen items
- Total planned cost
- Remaining balance
- "Within Budget" or "Over Budget" status

VI. Logic Plan — Pseudocode

1. Start the program.
2. Ask the user to enter their available daily budget.
3. Set the total cost to 0.
4. Ask how many canteen items the user wants to plan for.
5. For each item, ask for the item name and price.
6. Add each item price to the total cost.
7. Calculate the remaining balance by subtracting total cost from the budget.
8. Display the item list, total cost, and remaining balance.
9. If the remaining balance is 0 or more, display "Within Budget." Otherwise, display "Over Budget."
10. End the program.
